Scissor platform lifts can be simply operated by one individual and can complete the job of a lot of people.

### A. Efficiency

Scissor platform lifts have significantly benefited construction operations because the task that used to require a lot of effort and a lot of individuals, can now be done using the scissor lift and only one individual, the operator. Many workplace related injuries have been avoided and prevented all together by using this piece of machine. The scissor lift truck makes moving materials to levels higher than before or transferring stock from the topmost stack down to the lower floors a much more effective and safer method.

### B. Capacity

Ever since their introduction, the features, capacity and performance of the scissor lift has significantly improved. These days, there are maintenance function scissor hoists offered with the capacity of as much as four thousand pounds and which have height ranges of up to 35ft. Manufacturers of scissor platform lifts have had to meet the demands of lifting supplies with heavier loads. Some producers have introduced bigger capacity lifts which could be integrated into pick up trucks and automobiles like vans with height ranges of up to 20ft and a capacity of 10,000lbs.

Specialized for inside building maintenance; these machines together with their extended reach capacity are designed to have minimum platform work space to be able to get to small-spaced corner areas of complex commercial buildings and hotel lobbies.

### C. Useful Features

Self-propelled scissor lifts have control panels that are at all times available to the operators. Several units existing allow extendable platforms. This allows the operator to extend or minimize their platforms in response to their workspace availability at various levels. This is a helpful feature depending on whether the equipment is used outdoors or indoors.

Additional options on a few scissor platform lifts are platforms which could handle additional weight and bigger platforms intended for lifting. Lots of makers are presently over-viewing and addressing some of the needs of several different companies. For example, hotels and commercial buildings which have smaller entry halls combined with highly elevated lobbies could utilize models with higher elevation capacities which are constructed to fit into narrower spaces. The platform work area is adjusted depending on the workspace existing.

### D. Moving Requirements

There are units that could be utilized to work on outdoor construction locations and some have manufactured cabins that allow users the ability to take materials up to their above level work sites. Oftentimes, with construction sites in an open space and outdoor environment, there may be the need to transfer an entire office desk to an elevated level so as to properly monitor construction activities. The scissor lift is the best device to complete this job.
